

A vibrant yellow vintage taxi cab is parked on a city street. The car has a classic design with a prominent front grille and round headlights. A white sign on the roof reads "TAXI". In the background, there are palm trees, a building with a teal-colored wall, and a large concrete planter filled with red flowers. The overall scene suggests a warm, tropical location.

# myofficocab

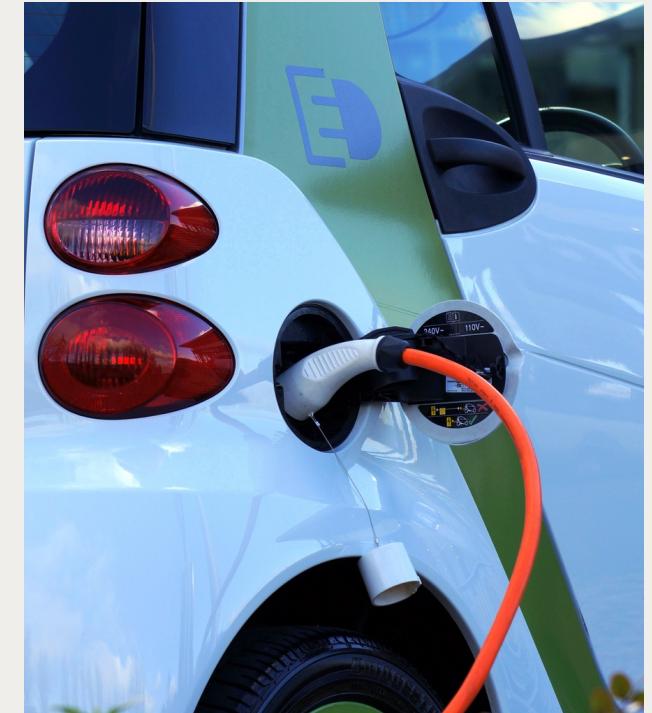

A pioneering eco-transportation company in India

Employee transportation  
solution for corporations

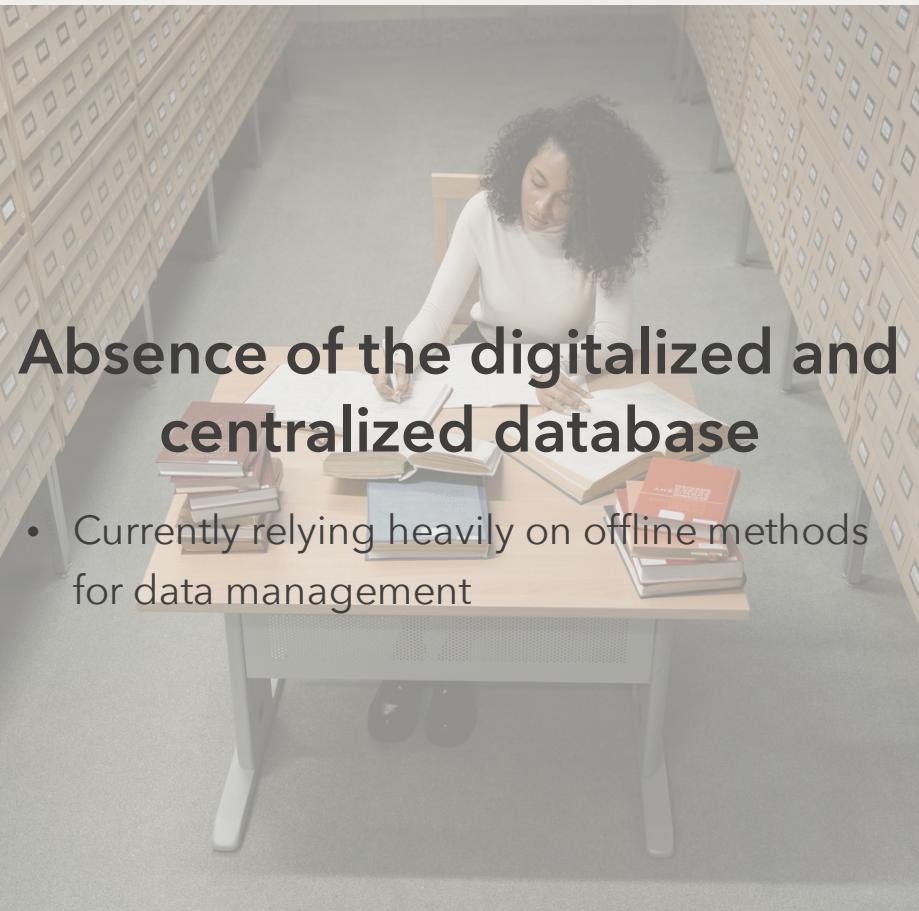

Fleet comprising various types  
of vehicles

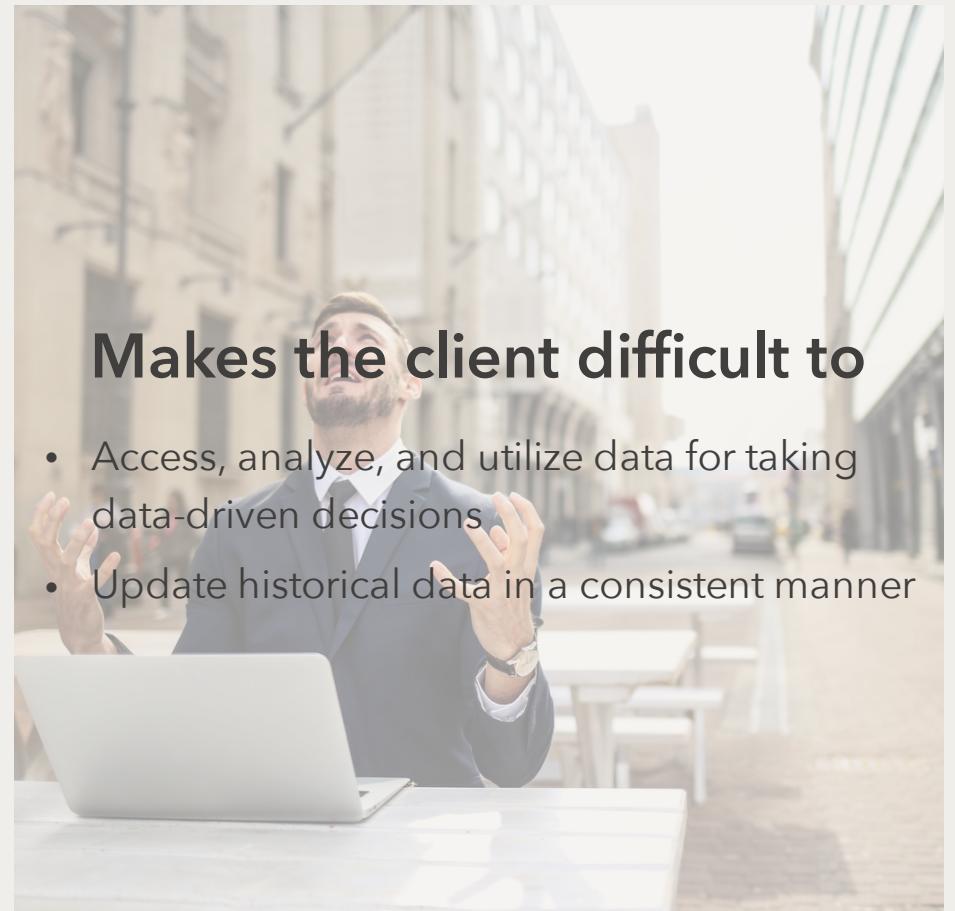

Provides eco-friendly commutes

# Business Problem

## Absence of the digitalized and centralized database

- Currently relying heavily on offline methods for data management

## Makes the client difficult to

- Access, analyze, and utilize data for taking data-driven decisions
- Update historical data in a consistent manner

# Project Goal & Objectives

## Goal

- Efficient management of data related to customers, transactions, fleet management, and employee details

## Objectives

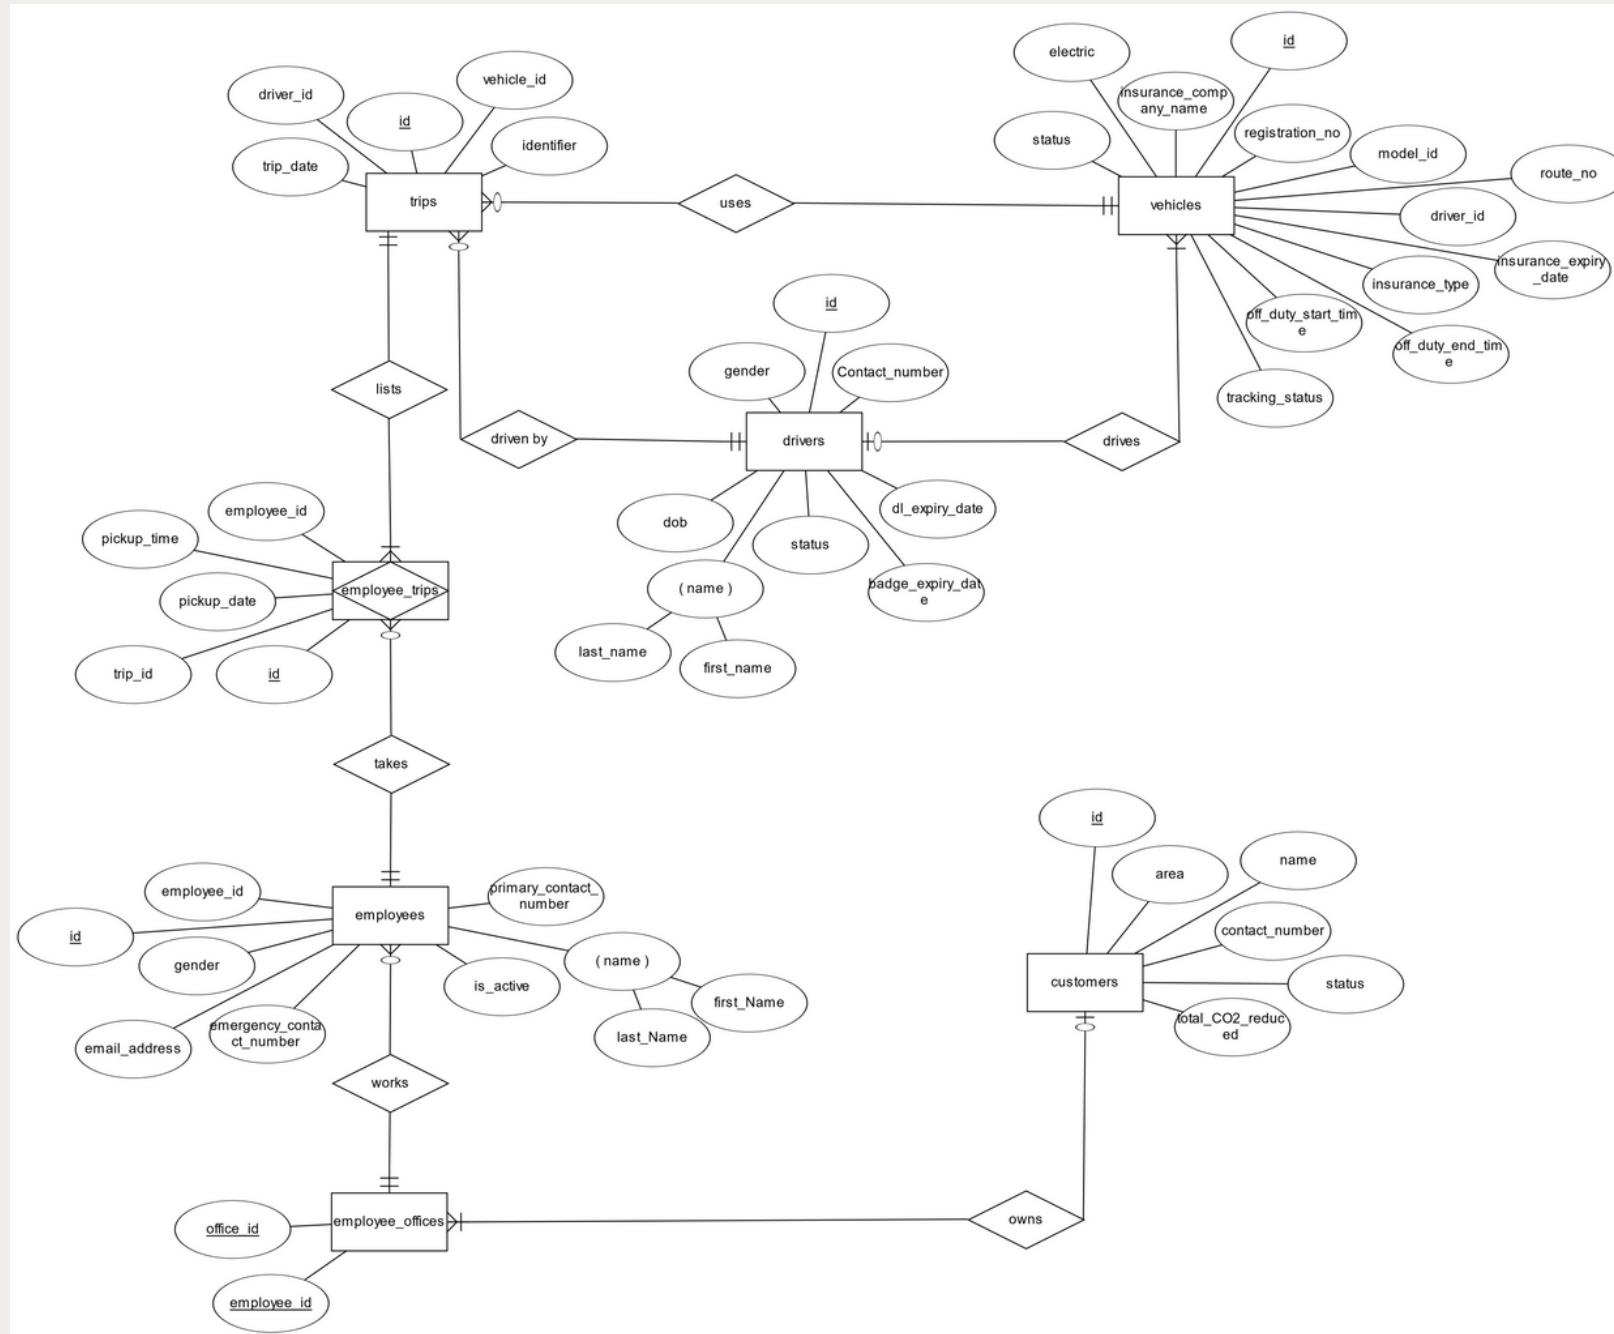

**Developing a more structured and centralized Database Management System (DBMS) facilitated through SQL**

- Enhance information management
- Streamline ETL processes
- Unlock valuable insights for understanding key metrics (e.g., month-on-month trips, top drivers month-on-month, busiest days of the week)
- Identify high-profit segments and channels

# Tables and Dataset

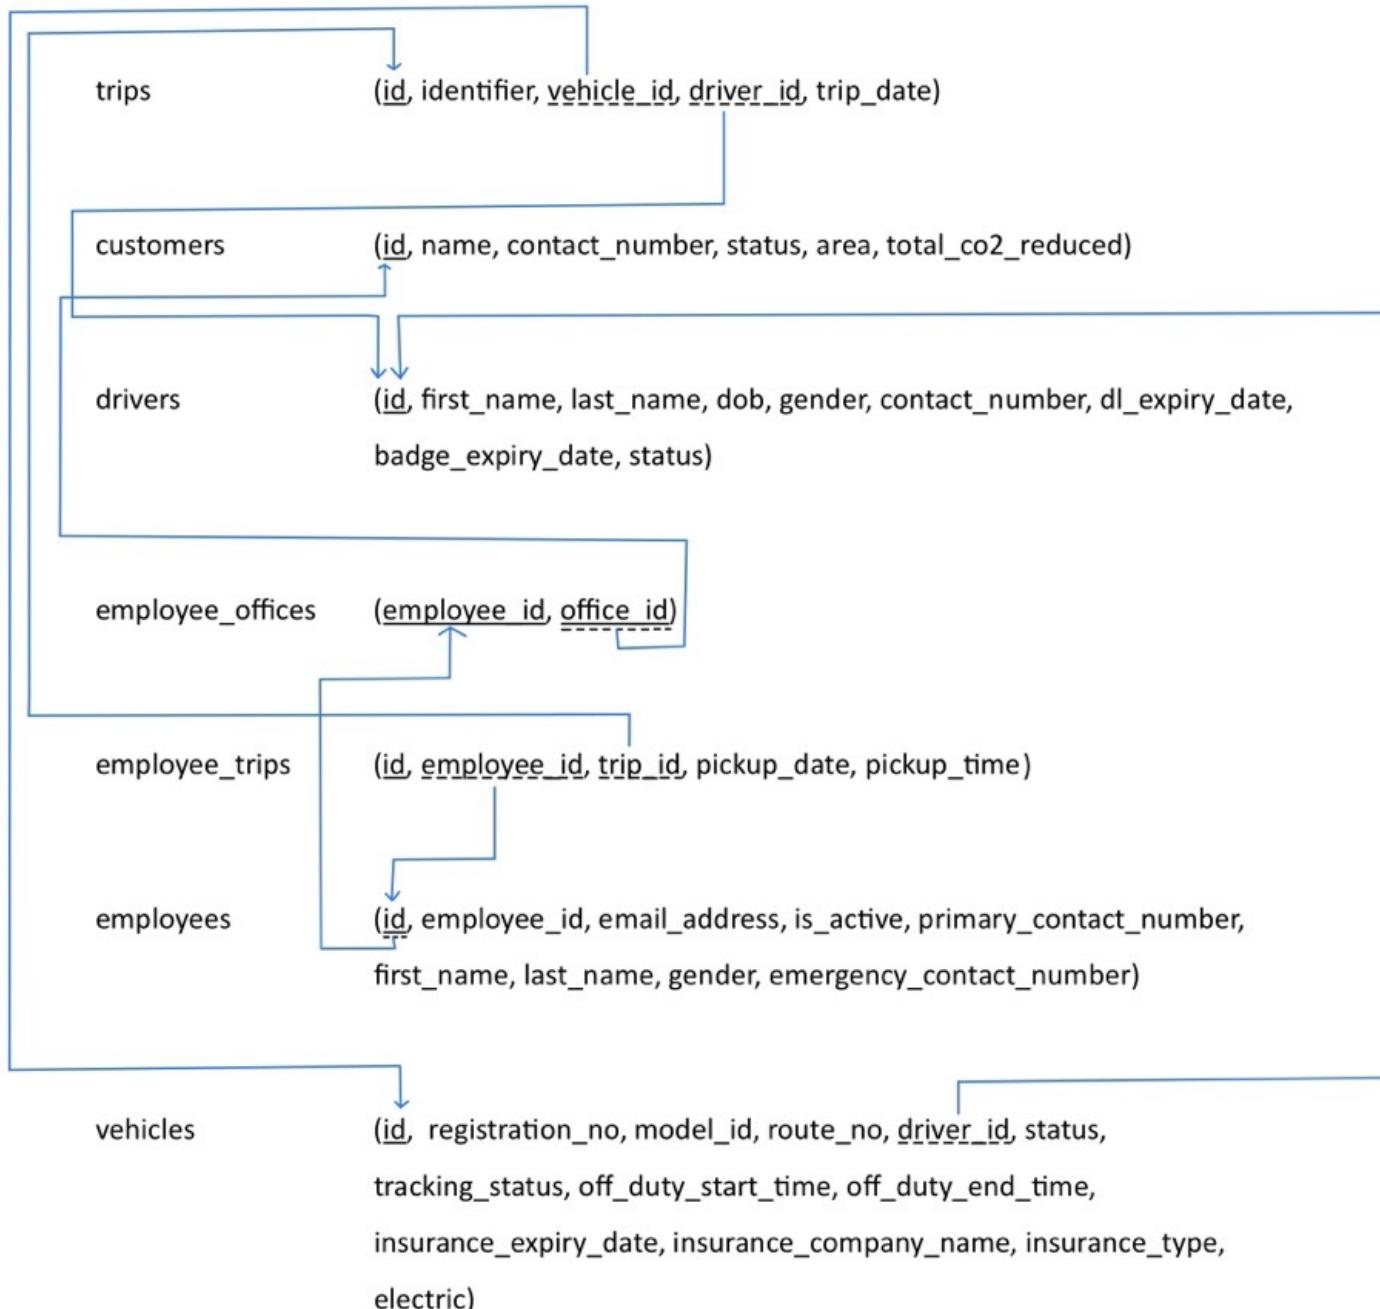

1. **Employees:** employee details such as employee ID, employee name consisting of first name and last name, gender, email address, primary contact, emergency contact, and active status
2. **Employee\_trips:** details of employees and their corresponding trips, along with pickup date, time, etc.
3. **Employee\_offices:** mapping between employees and customers
4. **Trips:** data for all trips, including driver and vehicle details
5. **Vehicles:** information regarding vehicles in fleet, including insurance details and registration information
6. **Drivers:** information regarding employed drivers, including name and license expiration
7. **Customers** (i.e., offices whose employees use myofficecab): information regarding the customer names and office location

# Conceptual Data Modeling (ERD)

# Relational Data Model

## (Relational Schema)

# Queries

**Look into the data to generate meaningful insights for the client**

- Trend of trips over time
- Identify the busiest days of the week
- Identify the busiest times of the day
- Flag rides exposed to insurance risk
- Locate areas with high demand

# Queries Example

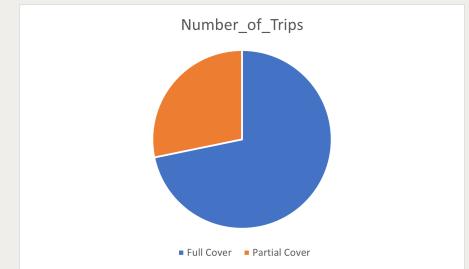

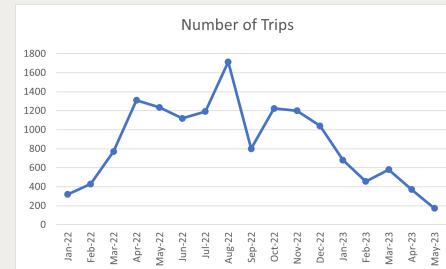

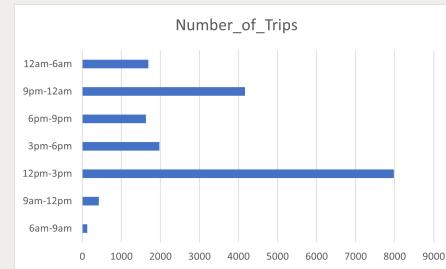

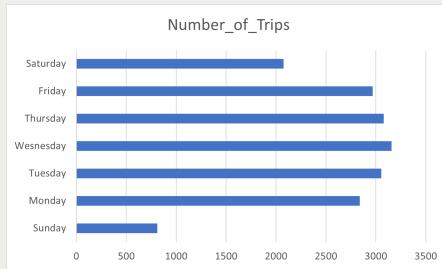

Identifying the busiest day of the week

```
1  -- Query 4 - -- Identifying busiest day of the week
2 • select day_of_week,
3   case when day_of_week =1 then 'Sunday' when day_of_week =2 then 'Monday' when day_of_week =3 then 'Tuesday'
4   when day_of_week =4 then 'Wednesday' when day_of_week =5 then 'Thursday' when day_of_week =6 then 'Friday'
5   when day_of_week =7 then 'Saturday' else 'Error' end as "Day",count(*) as Number_of_Trips
6   from(
7   select *,
8   dayofweek(concat(right(trip_date,4),'-',left(trip_date,2),'-',mid(trip_date,4,2))) as day_of_week
9   from trips t
10  left join (select distinct trip_id,pickup_date,pickup_time from employee_trips) et
11  on t.id = et.trip_id) a
12  group by 1,2
13  order by 3 desc;
```

Output

	day_of_week	Day	Number_of_Trips
▶	4	Wednesday	3156
	5	Thursday	3079
	3	Tuesday	3054
	6	Friday	2967
	2	Monday	2839
	7	Saturday	2077
	1	Sunday	811

# Insights

- The busiest day of the week: Wednesday and Thursday
- The busiest time slots: 12PM to 3 PM and 9PM to Midnight
- The maximum number of trips: 1714 (taken during August 2022)
- ~ 28 % of the rides were in partially insured cabs.
- The client could consider upgrading to full coverage to mitigate risks from accidents.

# Future Recommendations

**Minimized Manual Effort for the Billing Team**

Trip sign-off status and *employee\_trips* table will help manage completed trips and estimate the revenue of the trips.

## Expansion of Operations

Can onboard more clients and store data in the trips table.

## Future Records

Introducing new tables, such as the *feedback* table, will help the company assess their drivers in a better way.

THANK

YOU
